Education

B.Tech, HSIT, Nidasoshi  Belgaum, India

Profile

Experienced **Customer Success Engineer** with a strong technical foundation in **Node.js, API integrations, and SaaS platforms**. Proven ability to bridge the gap between customers and engineering teams—translating complex technical challenges into actionable solutions.

Skilled in **API debugging (Zapier, Make, REST, GraphQL)**, and resolving production-level issues across distributed microservice environments. Adept at analyzing logs, debugging integrations, and providing high-quality support to enterprise customers.

Previously worked as a **Backend Developer**, specializing in **Node.js, Express, Sequelize ORM, and PostgreSQL/MySQL**, with deep experience in **AWS (EC2, RDS, S3, ECS)** and **Docker-based deployments**. Brings hands-on expertise in optimizing API performance, automating workflows, and maintaining high system reliability.

Known for a **customer-first mindset**, effective cross-functional collaboration, and a structured approach to issue resolution—ensuring seamless product adoption, minimal downtime, and measurable customer satisfaction improvements.

Professional Experience

Customer Success Engineer, Nvizon solutions 06/2025
Mumbai, India

- **Contributed to Product Maintenance & Enhancements**, identifying recurring pain points and translating customer feedback into actionable improvements that enhanced reliability and usability.
- **Developed Automation Scripts** using **Golang** and **Node.js** to streamline internal workflows — including log analysis, cache purge operations, and performance benchmarking — reducing manual effort and issue resolution time.
- **Led Client Onboarding & Platform Setup**, collaborating closely with **sales and technical teams** to ensure seamless CDN integration into customer infrastructure, minimizing setup time and improving adoption.
- **Executed Proof of Concepts (POCs)** for potential clients, demonstrating platform capabilities and performance benefits, directly supporting sales enablement and successful conversions.
- **Performed Website Performance Audits**, analyzing Core Web Vitals, cache configurations, and network latency to deliver actionable optimization reports for clients.
- **Handled CDN & Caching Troubleshooting**, resolving complex edge cases involving stale assets, TTL mismatches, and cache header inconsistencies across environments.
- **Managed Support & Ticket Resolution**, partnering with engineering teams to reproduce, debug, and resolve customer issues efficiently while maintaining SLA compliance.

- **Collaborated on API Debugging & Integrations**, assisting customers in resolving **API, webhook, and email configuration issues** (SPF, DKIM, SMTP) across third-party tools like **Zapier** and **Make**.
- **Fostered Strong Customer Relationships**, driving continuous improvement through proactive engagement, platform insights, and personalized performance recommendations.

Solution Engineer, Gammastack

09/2024 – 05/2025
Bangalore, India

- **Collaborated with game designers and QA teams** to understand complex gaming requirements and translate them into reliable and scalable **slot game engines** using **Node.js** and **Golang**.
- **Developed, tested, and optimized game logic**, including **RTP (Return to Player)** and **volatility calculations**, ensuring each title met strict **regulatory and compliance standards**.
- **Integrated backend game engines with multiple APIs** for wallet management, player sessions, and real-time event tracking, ensuring seamless communication with third-party systems.
- **Conducted high-volume simulations** (10+ million game rounds) using **Node.js worker threads** to validate statistical fairness and performance benchmarks.
- **Troubleshoot live production issues** by replicating customer-reported scenarios, analyzing logs, and implementing fixes in collaboration with product and QA teams—ensuring quick resolution and minimal downtime.
- **Worked closely with customer support and business stakeholders** to interpret feedback, identify recurring issues, and propose backend enhancements to improve player experience.
- **Documented technical workflows and simulation reports**, contributing to internal knowledge bases and enabling faster issue reproduction and resolution.
- **Automated routine testing and deployment workflows** to streamline verification processes and reduce manual effort during version updates.

Key Achievements

- Reduced simulation test cycle time by **40%** through parallelization and worker thread optimization.
- Improved **API response consistency and error handling**, reducing production escalations by **30%**.
- Assisted in post-release monitoring and **customer issue analysis**, helping the support team resolve complex backend-related cases faster.

Senior Software Engineer, Vnnogile solutions pvt ltd.

01/2024 – 08/2024
Thane, India

Spearheading the design and implementation of high-performance backend applications for various clients, such as Tim Hortons India, Trupti Mumbai, and Certably Solutions in golang and nodejs.

Software Engineer, Vnnogile solutions pvt ltd.

05/2022 – 12/2023
Thane, India

Led the end-to-end development of more than 100 APIs, demonstrating a deep understanding of backend architecture and API design principles. Wrote scalable and robust APIs and also maintained various cron jobs to perform asynchronous tasks in golang.

Skills

Customer Success Engineering & Process

Optimization

- Proof of Concept (POC) Execution
- Ticket Management (JIRA, Zendesk, Freshdesk)
- Cross-functional Collaboration (Sales, Product, Engineering)
- Documentation & Knowledge Base Creation

Performance optimizing

Cache tuning , Enhancing core web vitals to get better SEO and reach

Nodejs

Express.js , Middleware , Asynchronous Programming , Performance Optimization , Monitoring and Logging

Sequelize ORM

Associations, Eager loading, Hooks, Migrations, Read replication

Golang

Pointers , Gin-Gonic , DSA , GORM

Redis

caching and pub sub mechanism

Linux

File handling, processes, permissions & hosting

Languages

- Javascript
- Golang
- SQL

Projects

The N7 Nitrogen Platform, *CDN*

06/2025

I work as a Customer Success Engineer responsible for onboarding new clients, setting up CDN and caching configurations, and ensuring their websites are optimized for performance. I analyze WebPageTest (WPT) and Lighthouse reports to identify bottlenecks and apply improvements such as image optimization, cache-control tuning, and latency reduction via CDN rules. I resolve support tickets related to caching issues, content delivery failures, or slow-loading pages, and collaborate closely with engineering teams when deeper fixes are needed. I also write automation scripts to streamline recurring tasks such as performance monitoring, cache purging, report generation, and deployment of configuration changes across multiple clients.

API debugging

Experienced with tools like postman , bruno , Zapier

Cloud services

AWS , GCP

Databases

Complex SQL queries , Stored procedures& Joins (Postgres/MYSQL), BQ

Datastructures and algorithms

Linear and non-linear datastructures

Security practices

JWT authentication, OAuth , Rate limitings, IP whitelisting and blacklisting.

Git/Gitlab

CDNS and Caching

Zem public, *Slot games*

I designed and developed slot games including *Zeus vs Hades* and *Dog House Megaways*, implementing **random number generator (RNG) logic** to ensure every spin outcome was unbiased, unpredictable, and met **provably fair** requirements. To validate fairness and compliance, I created **RTP (Return to Player) matching simulation scripts**, simulating millions of spins to calculate:

- **RTP accuracy** against target ranges (e.g., 95–97%).
- **Variance/volatility index** (low/medium/high) to balance entertainment value and risk.
- **Win distribution graphs** to demonstrate payout spread across different stake levels.

I optimized **symbol weighting, reel mapping, and bonus triggers** to ensure the final game was both engaging and mathematically fair.

Finally, I delivered **compliance-ready simulation reports** that could be submitted to gaming regulators, demonstrating provable fairness, correct RTP ranges, and variance control before launch.

Timhortan's india, *Canadian food chain restaurant.* ☑

I developed APIs for our SSR app, including a feedback system for stores, a daily report cron job, and an email alert for low ratings. I also implemented a campaign system to distribute personalized coupons to users across India for promotions and special events.

Certably solutions, *Property rental application for landlord and tenant* ☑

I worked on a property rental app that allows landlords to list properties and tenants to pay monthly via Stripe for secure transactions. I also implemented a fraud detection system to ensure a safe and trustworthy rental experience for both parties.

Trupti sweets, *Mumbais one of the leading sweet mart* ☑

I developed an e-commerce app for a top Mumbai sweet mart with a user-friendly shopping cart and integrated Shiprocket for efficient order processing, real-time tracking, and timely deliveries. This integration ensures a smooth and reliable shopping experience, enhancing customer satisfaction.

Jasgur, *An eco market for nature friendly people* ☑

I developed an affiliate marketing app with a back office for affiliates to add products and a Shopify CSV import feature for seamless data transfer. Additionally, I built an advanced keyword-based search engine, optimizing product discovery with filters, recommendations, and user intent considerations for an enhanced consumer experience.
